# Description of Task

Implement a Single Page Application demonstrating a login splash page using React. You must use the create react app cli to scaffold your project and github as your code repository. All Rest API request will be made to https://reqres.in/.

Requirements

1) Implement the following design in React. You are free to use any css framework of your choice. However, you must choose one of the following for state management (React Context API, Redux or Mobx) and React Router for routing.
2) You must use the LOGIN - SUCCESSFUL API and you must handle an unsuccessful login attempt with appropriate error messages.
3) Navigate the user to an authenticated view after a successful login and display a list of users using the LIST USERS API.
4) The authenticated view must only be accessible once the user has logged in.
5) The SPA needs to be responsive.

Assets
1) Logo: https://d20xd7mbt7xiju.cloudfront.net/test/tasmania/tastafe-logo.jpg
2) Background: https://d20xd7mbt7xiju.cloudfront.net/test/tasmania/tasmania-background.jpg
3) Primary colour: rgb(172, 196, 53)
